

Household Filter (HHF) – One-Bucket or Two-Bucket

Up to 200 liters of 99.99% bacteria-free water daily

Installed with 1 or 2-bucket hollow membrane filter units.

Bio Sand Filter (BSF)

Produces 40-60 liters of 80-99% bacteria free-water daily

Prices vary country to country depending on cost of materials and transportation

Facility/Community Systems

Facility Filter (FF)

Produce 1000 – 10,000 liters of 99.99% bacteria free water daily

One wall unit (two 10" hollow-membrane filter and back-wash valving system)

Aqua Clara International Filtration Products

Laboratory Tested & Field Proven

(Prices may vary from country to country and due to scalability)

Arsenic Filter Systems

Household Filter with BSF (BSF+As)

- a. 20 liter arsenic reactors with 4 liters of ACI Media
- b. Two+ year applications and proof of concept testing

Facility Filter (FF+As)

- a. a simultaneous reduction in bacteria and arsenic with 50 liter arsenic reactor with 20 liters of ACI Media
- b. 1000-10,000 lpd of 99.99% bacteria free water & <5 ppb arsenic
